

COMMERCIALMANAGED PROFILE

Fill the gap your platform leaves behind

Intune, SCCM or your RMM already own the OS, Office and browsers.
PatchManager covers the third-party software they don't — and records every deferral as an audited decision.

THE BOUNDARY

Your platform stops short of the long tail

ALREADY OWNED

Your platform patches

Windows Update

Microsoft 365

Chrome / Edge

Reliably delivered through Intune, SCCM, WSUS or your RMM.

NOBODY'S JOB

The third-party gap

WinGet apps

Store apps

.NET / Python / Node

Scoop

Vendor updaters

Utilities & archivers

The apps with no MDM channel — patched by hand, or not at all.

THE PROFILE

Built for a managed estate

CommercialManaged defers OS, Office and browser patching to your platform, then patches the third-party gap it leaves — as one reviewable PowerShell file, deployed by the tooling you already run.

Covers the gap

Third-party apps, runtimes and vendor updaters your platform doesn't reach.

Defers cleanly

OS, Office and browsers stay with the system that already owns them.

Proves both

Every patch and every deferral recorded in one audit-ready report.

Deployed as **SYSTEM** via Intune or SCCM — no new agent, no service, no dependency.

THE SPLIT

Exactly what it touches

COVERED BY PATCHMANAGER

- WinGet third-party packages
- Microsoft Store apps
- Runtimes — .NET, Python, Node
- Native vendor updaters

DEFERRED TO YOUR PLATFORM

- Windows Update
- Microsoft 365 Click-to-Run
- Chrome, Edge & WebView2
- Teams & OneDrive

ALWAYS ON — NEVER PATCHES

- Inventory-wide KEV scan
- Environment staleness
- End-of-life exposure
- SLA tracking

THE SAFETY NET

Deferred is never invisible

The report-only scans keep watching the managed apps too — they never change the machine, so there's no reason to hand them off. A coverage boundary doesn't become a blind spot.

KEV still watches

The inventory-wide CISA KEV scan covers all installed software — including the apps your platform owns.

Lifecycle still checked

Staleness and end-of-life scans flag out-of-support Windows or an EOL browser line your platform may miss.

Every deferral logged

Each descoped item appears in the report with its reason — a decision an auditor can see, not a silent miss.

If your platform falls behind on an actively-exploited app, the report **still raises it**.

PROOF

One record, patched and deferred alike

Every row records what was checked, what changed, and — for a deferred item — exactly why it was left to your platform.

- HTML

Interactive — search, filter, sortable, print-friendly.
- JSON

Full machine-readable results for automation.
- CSV

Flat per-row export for SIEM, Excel or Power BI.

Descoped rows carry their reason, so an auditor sees precisely what was deferred and why.

1.4.0

EVIDENCE ROWS

11 total / 6 action / 4 provider

UPDATES APPLIED

6

The run completed with no actionable KEV, SLA, failure, or script-error signals. Provider evidence remains below for audit review.

NEEDS REVIEW

0

Blocked, failed, verifying, and script-error signals to follow up. See the actions below.

SECURITY

0 KEV

0 SLA breach(es) recorded. KEV and SLA exposure is detailed in the security section.

REBOOT REQUIRED

1

Update(s) needing a restart to finish - PatchManager never reboots on its own.

CONFI

DEPLOYMENT

Rolls out with tools you own

Deploy as SYSTEM

Ship the script via Intune Win32, SCCM or GPO to an admin-only path.

Rings & schedule

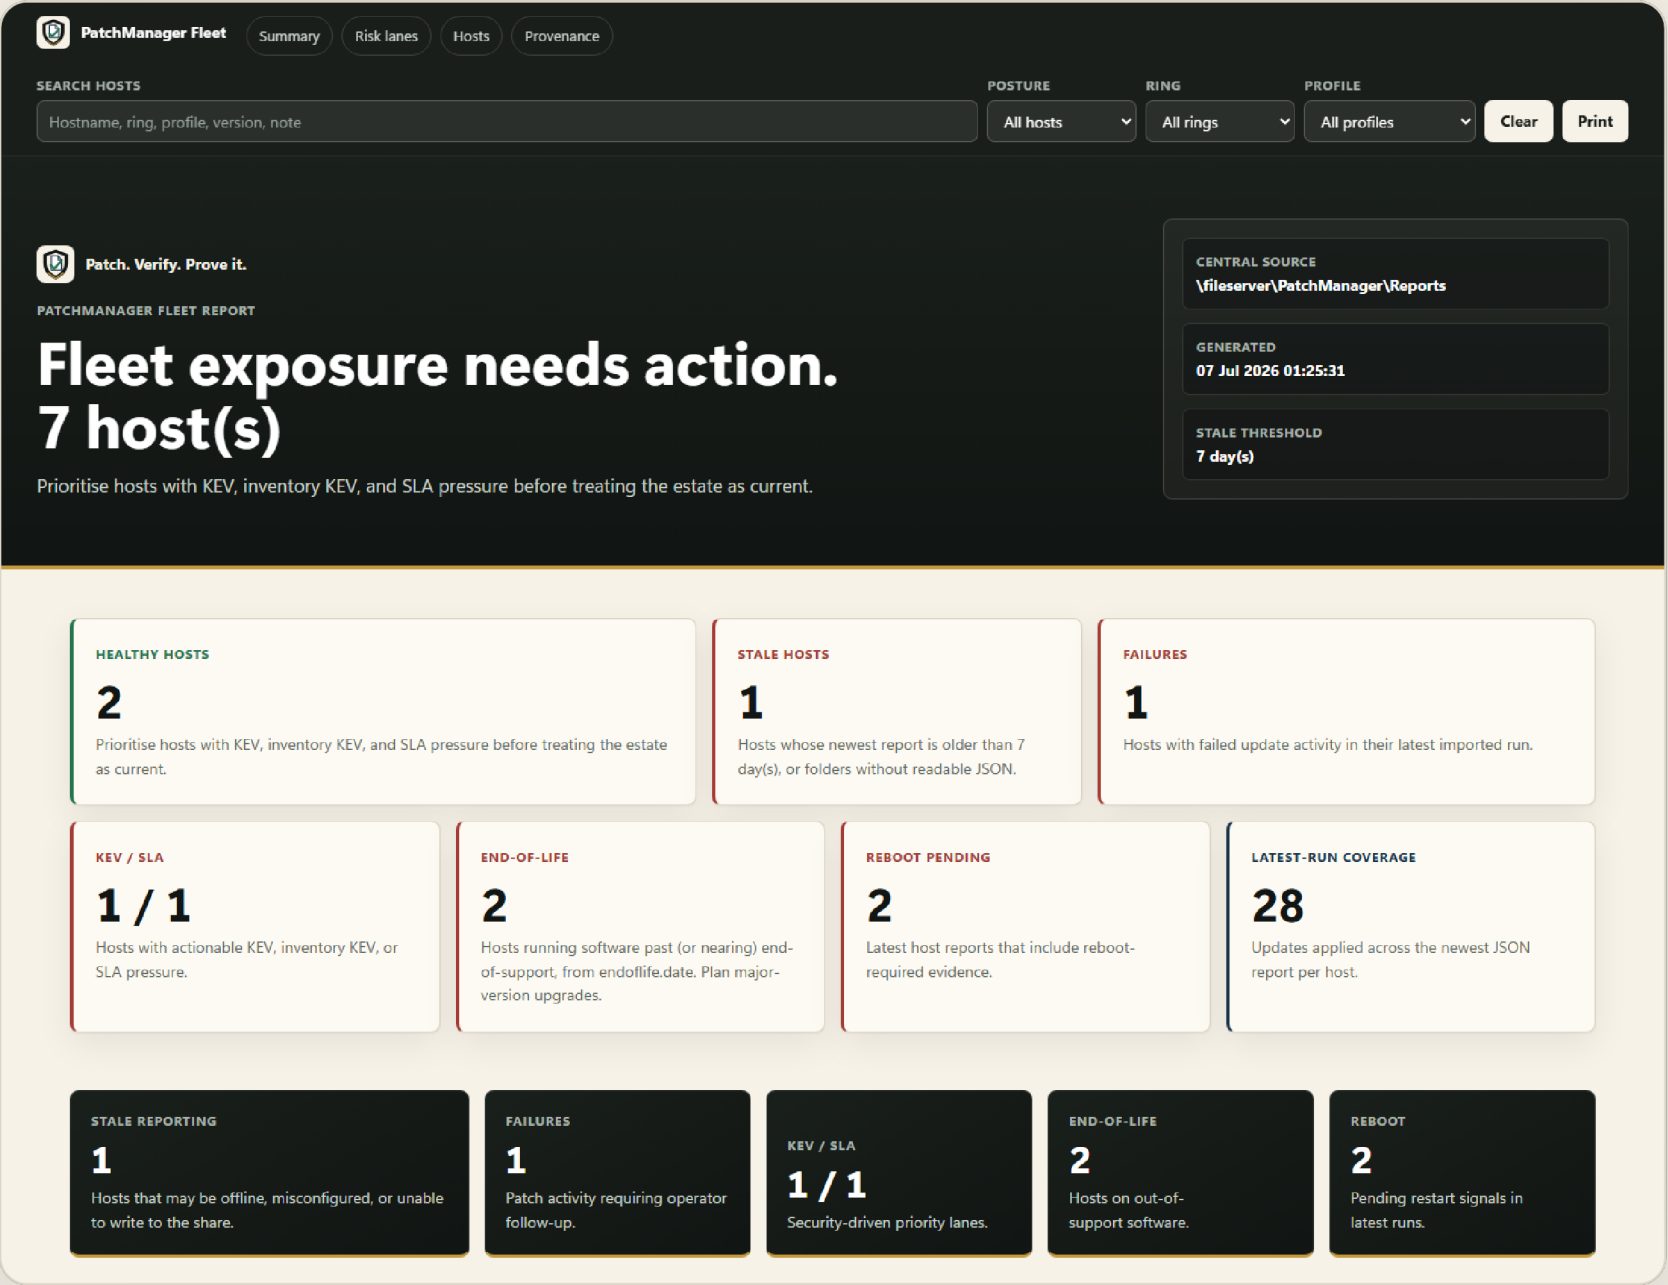

Assign Pilot / Early / Broad by registry; run nightly with jitter and a maintenance window.

Central evidence

Point reports at a share; roll up the estate in the fleet dashboard; ingest events into the SIEM.

Self-update off

Your platform owns deployment — the script won't update itself behind your back.

THE RECOMMENDATION

Pilot it on the third-party gap — nothing else changes.

No overlap

Your platform keeps the OS, Office and browsers — untouched.

No blind spots

KEV, lifecycle and SLA scans watch the whole estate, managed apps included.

No licence cost

Zero fees, no agent — deployed by the tooling you already operate.

PATCH. VERIFY. PROVE IT.
